

What is claimed is:

1. An aircraft galley for preparing food and drink, comprising:

a galley body constructed of a panel material and having a storage compartment; a table and a sink provided in the galley body; a hot-water tap provided above the sink; and a hot-water supply unit for supplying hot water to the hot-water tap, wherein

the hot-water supply unit has a hot-water tank with an electric heater, an electric instantaneous water heater provided adjacent to the hot-water tank, a hot-water supply line interconnecting the hot-water tank and the hot-water tap, and a control unit for controlling the electric power supplied to the heater of the hot-water tank and the instantaneous water heater, and

the control unit controls the electric power supply according to a command from a management unit which manages the electric power in the aircraft.

2. The aircraft galley according to claim 1, wherein the hot-water supply line interconnecting the hot-water tank and the hot-water tap comprises a hot-water supply pipe for supplying hot water in the hot-water tank to the hot-water tap and a recycling pipe for returning hot water immediately before reaching the hot-water tap in the hot-water pipe to the hot-water tank.
